

# BOEING REALTY CORPORATION FORMER C-6 FACILITY LOS ANGELES, CALIFORNIA

# TECHNICAL MEMORANDUM QUARTERLY REPORT NO. 17 FIRST QUARTER 2006 FULL-SCALE SVE SYSTEM

To: Mr. Brian Mossman

Boeing Realty Corporation 4900 Conant, Building 1 Long Beach, CA 90808

From: Haley & Aldrich, Inc.

Date: 25 April 2006

Subject: Quarterly Report No. 17, First Quarter 2006 Full-Scale SVE System, Boeing

Realty Corporation, Former C-6 Facility - Parcel A, Los Angeles, California

Haley & Aldrich, Inc. (Haley & Aldrich) has prepared this technical memorandum to summarize full-scale soil vapor extraction (SVE) activities conducted at the former Boeing Realty Corporation (BRC), C-6 Facility, Building 1/36 area (Site). The Site is located at the northwest corner of Normandy Avenue and Knox Street in the City of Los Angeles, California (Figure 1).

This technical memorandum presents the Site background followed by a discussion of SVE operations and has been prepared in response to Regional Water Quality Control Board, Los Angeles Region (LARWQCB) reporting requirements.

#### BACKGROUND

Laboratory results for soil samples collected at the Site indicated the presence of volatile organic compounds (VOCs) at depth, requiring remediation to prevent possible impact to groundwater. SVE was recommended for the remediation of deep impacted soil (soil deeper than 12 feet below ground surface). Haley & Aldrich was contracted by BRC to install and operate first an SVE pilot test system, and later a full-scale SVE system.

Workplans for the SVE systems were submitted and approved by the LARWQCB in June 2001, and December 2001, respectively. The full scale SVE system at the Site was operated from May 2002 to September 2004 when the system was shut down to accommodate Site redevelopment. The full scale SVE system was re-mobilized to the Site and restarted on 2 March 2006.

#### SVE SYSTEM DESCRIPTION AND HISTORY

SVE pilot testing at the Site was conducted between July and October 2001, when the pilot SVE system was shut down and the SVE wells were abandoned to accommodate Site grading. The pilot SVE system was re-installed and re-started in December 2001 and operated through March 2002.

Full scale SVE treatment of deep soils at the Site was started in May 2002. The full-scale SVE system consisted of 53 well screens (17 dual- and 9 single-screened SVE wells), a trailer-mounted 1,000 standard cubic feet per minute (scfm) blower system, three 8,000-lb granular activated carbon (GAC) vapor control vessels (primary, secondary, and stand-by), and associated piping.

In June 2002, unexpected exothermic carbon reactions with 2-Butanone (MEK) required that the SVE system be shut down for repairs and modifications. The system was restarted on 11 March 2003. After system modifications, the system was optimized to remove mass and follow a seven-day carbon change-out frequency. Three, single-screened SVE wells were installed in June 2004. Full scale SVE treatment of deep soils at the Site continued through September 2004, when the system was shut down to facilitate Site redevelopment.

Prior to Site redevelopment, the SVE wells were cut, capped, surveyed, and buried at least 3 feet bgs to protect them from site redevelopment activities. The SVE mechanical equipment, including carbon vessels, was removed and stored at an off-Site location. Between February 2005 and March 2006, during Site redevelopment, the SVE wells were uncovered and connected, via subsurface piping, to the remediation compound located at the northeast corner of the Site (Figure 2) and the SVE mechanical equipment was re-mobilized to the Site. Full scale SVE operations resumed on 2 March 2006.

#### OPERATIONAL SUMMARY, FIRST QUARTER 2006

Operations for the First Quarter 2006 covered the period of 2 March 2006 through 31 March 2006. The total mass of VOCs reported removed during SVE operations during the first quarter 2006 was approximately 62 pounds. Operational data for the full-scale SVE system is presented in Table 1.

Total hours of operation for this quarter were approximately 520. Down time occurred due to high water alarms in the remediation systems secondary containment sump which shut the system down. GAC change outs were performed during this quarter. Percent up time based on all hours in the first quarter (711 hours; March 2 through 31 March 2006) is 74 percent and is presented on Graph 1. The system was operated in compliance with South Coast Air Quality Management District (SCAQMD) permit requirements during this quarter.

A system maintenance activity log is provided in Table 2 and a summary of additional operational data is presented below.

Days of Operation	22 (520 hours)	
Available Days of Operation	30 (711 hours)	
Operational Time (%)	74%	-
Estimated Mass Removed during Period	62 pounds of VOCs reported as total non-	-
	methane hydrocarbons.	
Cumulative Mass Removed (July 2001-March 2006):	31,523 pounds of VOCs	
		1

#### **OPERATIONS INFORMATION, FIRST QUARTER 2006**

Key events that occurred during the quarter include:

2 March 2006	System started, begin	equipment shakedow	n.	
15 March 2006	Finish system shakedo	own period.		

Well vapor concentrations measured at the end of the First Quarter 2006 are plotted on Figure 3. The well vapor concentration contours depicted on Figure 3 illustrate baseline start-up concentrations as well as remediation progress through 31 March 2006. Contours for March 2006 were not prepared because of limited well field data; not all wells have been brought on line. Well field MEK concentration contours, from December 2002, April 2003, February 2004, and September 2004 are depicted on Figure 4. Samples were not collected from the well field for MEK analysis during the first quarter of 2006.

The cumulative mass removed by the full-scale SVE system is shown in Graph 2. Total VOC concentrations reported in grab samples collected from the undiluted influent of the SVE system during start-up and at the end of the quarter are plotted on Graph 3. Exothermic reactions were not observed the GAC beds during the first quarter of 2006.

#### FIELD MEASUREMENTS, FIRST QUARTER 2006

As per the SCAQMD permit requirements, flow rate and VOC concentration measurements were collected at the undiluted inlet, diluted inlet, between the GAC vessels, and at the exhaust stack. Flowrates were measured with a direct flow meter or by a hand-held Veloci-calc meter™ Additional measurements collected during operation included vacuum readings at each extraction well, total inlet, and the GAC vessels and the blower exhaust temperature. The combined system influent VOC measurements are presented in Table 3. Field measurements of flow, VOC concentration, vacuum, and temperature were also collected at each well during the quarter. These measurements are provided in Table 3.

Individual SVE well flow rates this period ranged from approximately 3 to 81 scfm for a total flow rate from the well field of 284 to 347 scfm. The system operated with inlet vacuums ranging from approximately 34 to 54 inches of water. It should be noted that of the 53 well screens, only 26 had been brought on line by the end of the quarter.

#### VAPOR SAMPLING AND ANALYSIS, FIRST QUARTER 2006

For this period, three vapor samples were collected from the process air stream (one from the undiluted inlet to primary GAC vessel, one from the effluent of the primary GAC vessel, and one from the exhaust from the secondary GAC vessel) and delivered to a state-certified laboratory for analysis. These samples were collected for SCAQMD permit compliance as well as system performance evaluation. The vapor samples were collected using a Tedlar bag in a vacuum case. Laboratory analyses were conducted on vapor grab samples using EPA Method 21/TO-14A. The laboratory results of the vapor sampling from the system are summarized for detected compounds in Table 4.

Based on the results of the laboratory analysis of vapor grab samples, maximum undiluted inlet VOC concentrations of speciated compounds in parts per billion by volume (ppbv) for the period are as follows:

1,1-Dichloroethene (1,1-DCE)	3,000 ppbv
Trichloroethene (TCE)	2,100 ppbv
1,1,1-Trichloroethane	230 ppbv
Tetrachloroethene (PCE)	63 ppbv
1,1-Dichloroethane (1,1-DCA)	30 ppbv
trans-1,1-Dichloroethene (trans 1,1-DCE)	22 ppbv
cis-1,1-Dichloroethene (cis 1,1-DCE)	15 ppbv
Chloroform	13 ppbv
Trichlorofluoromethane	12 ppbv
Benzene	5.9J ppbv

DCE was the VOC detected at the highest concentration during the first quarter of 2006. Total petroleum hydrocarbons as gasoline (TPH-g) were reported in laboratory analysis; however, concentrations of gasoline related compounds such as toluene, ethylbenzene, and xylene were not detected. MEK was not detected during the first quarter of 2006. This is likely because wells which are known to produce MEK had not been brought on-line by the end of the quarter.

Based on laboratory analytical data collected this quarter, the mass of VOCs, measured as total non-methane hydrocarbons was approximately 62 pounds, as shown on Graph 2. The average mass removal rates for this quarter are estimated to be approximately 3 lbs/day.

Figure 3 depicts well field VOC concentrations and contours, based on data collected since the system was restarted in 2003. Well field MEK concentration contours, from between December 2002 and September 2004 are depicted on Figure 4.

#### **ACTIVITIES FOR SECOND QUARTER 2006**

Based on VOC concentration measurements and mass removal rates observed this quarter, SVE operations will continue during the Second Quarter 2006. This will include:

Weekly monitoring of system parameters and well field VOC concentrations

Well field optimization to maximize mass removal while maintaining maximum system flow, extracting from as many wells as possible, and balance GAC usage rates.

Weekly sampling to assure compliance with SCAQMD permit conditions

We appreciate the opportunity to provide environmental consulting services on this project. Please do not hesitate to call if you have any questions or comments.

Sincerely yours,

HALEY & ALDRICH, INC.

Patrick Keddington, PE Senior Engineer

Mehdi Miremadi Senior Vice President

#### Notes:

ppmv: parts per million by volume

scfm: standard cubic foot per minute (acfm corrected for vacuum and temperature)

NA: Data not available or applicable

NM: Data not measured

GAC: granular activated carbon

\*\* Associated hour meter readings are extrapolated from nearest date and time readings with hour reading measurements

- (1) Direct flow readings taken by hand-held TSI Veloci-calc Plus, unless otherwise denoted
- (2) Measurements taken with a Foxboro OVA-108 PID calibrated to 100 ppmv Hexane until August 2003 when changed to MiniRea-2000.
- (3) As of 3/12/03, Field measurments were conducted using a 10.6 eV PID. No correction has been applied.

#### TABLE 2 MAINTENANCE LOG

BRC Former C-6 Facility Los Angeles, California Building 1/36 Interim Action SVE System Site Name: Location: System:

DATE	MAINTENANCE ACTIVITY
7/2/2001	Pilot system started
8/17/2001	One GAC vessel was changed out (8,000 lbs), system shut down contingent to potential move to C-1
9/11/2001	System restarted
10/1/2001	System shutdown and wells abandoned for site grading
11/29/2001	New well installed and re-piped to system
12/13/2001	System restarted
12/20/2001	System shutdown, GAC breakthrough
12/28/2001	One GAC vessel was changed out (8,000 lbs), system restarted
1/31/2002 2/6/2002	System shutdown, GAC breakthrough One GAC vessel was changed out (8,000 lbs), system restarted
2/21/2002	Siystem shutdown, GAC breakthrough
2/27/2002	One GAC vessel was changed out (8,000 lbs), system restarted
3/8/2002	System shutdown, GAC breakthrough, one GAC vessel was changed out (8,000 lbs), system restarted
3/29/2002	Pilot system shutdown and removed, GAC breakthrough, install 1,000 scfm unit
4/17/2002	One GAC vessel (8,000 lbs) changed out in preparation for 1000 scfm unit
5/15/2002	1000 scfm unit installed and started, South vessel as primary carbon
5/18/2002	System shutdown, west vessel switched into primary position, system restarted
5/21/2002	South GAC vessel was changed out (8,000 lbs), system restarted, south vessel as primary carbon
5/27/2002	System shut down, GAC breakthrough
5/29/2002 6/3/2002	South and West GAC vessel were changed out (16,000 lbs), system restarted, west vessel as primary carbon North vessel as primary and south vessel as secondary carbon, system modifications installed
6/7/2002	System shutdown due to apparent vandalism
6/12/2002	GAC overheating discovered. Quenched with water
6/13/2002	Additional GAC quenching. GAC removed from all three vessels
	Bidding and procurement for retrofit
10/30/2002	Notice to proceed for retrofit contractor
11/13/2002	Complete water line installation
12/3/2002	Deliver GAC vessels with retrofits
12/10/2002	Equipment and electrical installation
	Holiday shutdown period
1/3/2003 3/12/2003	System modification and pre-startup testing Begin start-up procedures: System operating during working hours while extraction wells are brought on-line
3/14/2003	Continuing start-up procedures: SVE is left to run continuously. More wells are brought on line.
3/24/2003	One GAC vessel was changed out (8,000 lbs), system restarted
3/31/2003	System shut down while waiting for carbon regeneration, GAC breakthrough during start-up procedures.
4/1/2003	Carbon in vessels V-2 and V-3 was replaced (approx 16,000 lbs) and the system restarted.
	Vessel V-4 made the primary and vessel V-3 the secondary.
4/3/2003	Start Turning on category 1 wells (wells with expected MEK concentrations)
4/7/2003	Removed 30 gallons of water that accumulated in wellfield piping.
	Water placed in on-site water storage tank.
4/11/2003	Breakthrough from primary vessel (V-4). Vessel V-3 made the primary and Vessel 2 the secondary
4/15/2003	Finished opening wells for re-start up prodedures: all wells open. Carbon in vessel V-4 replaced (8,000 lbs).
4/16/2003	Breakthrough from primary vessel V-3. Vessel V-2 made the primary and vessel V-4 the secondary. Carbon in vessel V-3 replaced (8,000 lbs.).
4/21/2003	Breakthrough from vessel V-2. Vessel V-4 made the primary and vessel V-3 the secondary.
	Carbon stored on-site while carbon is re-profiled as all wells are now on-line
4/25/2003	Carbon in vessel V-2 replaced (approx 6,500 lbs.).
4/29/2003	Breakthrough from vessel V-4. Vessel V-3 made the primary and vessel V-2 the secondary.
5/5/2003	Operation and Maintenance of SVE system turned over to Wayne Perry. Breakthrough of primary vessel (V3).
5/6/2003	Change carbon in primary (V3) and secondary (V2) vessels.
5/8/2003	Meeting with Value Engineering to obtain access to PLC program. Check system.
5/12/2003 5/14/2003	O&M of system by WPI, breakthrough on primary vessel (V2). Changed primary vessel to V4 and secondary to V3.
5/19/2003	Carbon change vessel (V2).  O&M by WPI, breakthrough of primary vessel (V4), changed primary to V3 and secondary to V2.
5/21/2003	Carbon change vessel (V4).
5/22/2003	System shut down due to AQMD permit compliance issues. System remains shut down.
6/27/2003	Reviewed start-up check list.
	Raised exhaust stack from 12.5 to 14 feet.
	Blower motor was unstuck.
7/4/0000	Drained water from carbon canisters prior to start up.
7/1/2003	System shut down pending carbon change out.  Carbon in V-2 and V-3 was replaced. V-4 was changed to primary and V-3 was changed to secondary.
7/2/2003 7/18/2003	Breakthrough from primary vessel (V-4). Vessel V-3 made the primary and V-3 was changed to secondary.
7/24/2003	Carbon in V-4 was replaced. Greased motor and blower. Checked blower oil.
7/31/2003	Breakthrough from primary vessel (V-3). Vessel V-2 was changed to primary and V-4 the secondary.
8/7/2003	Carbon in V-3 replaced with 7 sacks of carbon. Secondary vessel changed from V-4 to V-3
8/14/2003	Per H&A Squire, WPI closed VEW24A at 08:00. Carbon in V-2 replaced with 7 sacks of carbon.
8/21/2003	Per H&A Squire, WPI opened Wells VEW22A and VEW24A. WPI also rechecked the following wells at H&A's
	direction: VEW9, VEW10B, VEW11B, VEW22A and VEW24A. VOC readings were taken after wells were opened.

8/28/2003	Carbon in V-3 replaced with 7 sacks of carbon. Primary vessel changed from V-3 to V-2. Water pump making noise
9/4/2003	may need to be replaced. Computer screen not working and was unable to get temperatures on carbon tanks.
9/4/2003	Pump that removes water from carbon tanks still not working.  Changed flows on VEW9, VEW11B and VEW24A. Opened and set flow at 10 for wells VEW21A, VEW21B, VEW23A,
	VEW23B and VEW24B per H&A.
9/5/2003	H&A is working on resolving computer issue which is still not working so there are no temperature readings.
9/5/2003	Adjusted wells per H&A: VEW9, VEW11B, VEW23A, VEW23B, VEW24A and VEW24B lowered flow to 5.  Opened VEW24A, VEW24B to 10 scfm eff at 325 scfm. Opened VEW23B to 10 scfm eff at 1250 scfm. Closed VEW23B, VEW24A and VEW24B and left system running.
9/11/2003	Primary vessel changed from V-2 to V-4. Carbon in V-2 was replaced with 7 sacks of carbon. Opened VEW24A and
0,11,2000	VEW24B and set at 10 scfm per H&A.
9/18/2003	Primary vessel changed from V-4 to V-3. Carbon in V-4 was replaced with 7 sacks of carbon per H&A. Opened VEW23B. WPI reduced scfm to 8.25 that lowered undiluted influent to 845.
9/25/2003	Primary vessel changed from V-3 to V-2. Opened VEW23A at 20 scfm. Changed scfm on VEW9, VEW10B and VEW 11B from 10 to 20 scfm.
10/9/2003	Per Haley & Aldrich, WPI opened Wells VEW-9, 10B, 21B and 24B to 100% to raise influent concentrations to 860 pppmv and opened VEW-23B to 11 scfm. No carbon change occurred. Primary vessel changed from V-2 to V-4 and secondary vessel from V-4 to V-3.
10/16/2003	No changes at wells. Added 7 sacks of carbon to V-2 and changed primary vessel from V-4 to V-3 and secondary vessel from V-3 to V-2.
10/23/2003	Per Haley & Aldrich, WPI closed Wells VEW 5, 6, 15A, 17A &B 18 A&B and 20A. The system was shutdown for 45 minutes to change blower oil and lube bearings. Carbon in V-4 was replaced with 7 sacks of carbon.
10/30/2003	Arrived on site and the system was found not running. Blower was replaced with 7 sachs of ceroon.  Arrived on site and the system was found not running. Blower was replaced with 7 sachs of ceroon.
	and motor. Re-started system.
11/3/2003	Arrived on site to verify system was in operation per Haley & Aldrich, took system readings at carbon system. Carbon 1 and exhaust exceeded limits, shut down system for carbon change. Changed carbon in V-3 and V-2, placing 7 sacks of carbon in each. Primary vessel was switched from V-3 to V-2 and then to V-4.
11/10/2003	Temperature of carbon tanks was checked.
11/13/2003	Unit had shut down on November 10, 2003 at approximately 3PM. System flooded carbon tanks V-3 and V-2. Berm was found full of water as is storage tanks. Unit will remain down until all water is removed.
11/20/2003	Unit is running on dilution air only. Well field was closed off and then VOC readings were measured at exhaust and after Carbon #1. Later, well field was opened. Per Haley & Aldrich, well VEW-23B was closed. Primary vessel switched from V-4
11/26/2003	to V-3. Upon departure from site, WPI opened dilution valve to 100% and closed valve to well field per Haley & Aldrich.
12/1/2003	Upon arrival, WPI opened well field valve and closed manual dilution valve. Per Haley & Aldrich, WPI opened 23B to raise influent level to 949, carbon breakthrough was 11.7 and exhuast was 2.8. Water storage tank has 19" of water. SVE system must be pulling water into the knock-out pot and pumping it into the tank. Unauthorized trucks and bikes have been driving around the well
	field and leaving tracks.
12/4/2003	Primary vessel switched from V-3 to V-2; secondary vessel switched from V-2 to V-4.
12/11/2003	Primary vessel switched from V-2 to V-4; secondary vessel switched from V-4 to V-3. Carbon in V-3 was replaced with 7 sacks
12/18/2003	of carbon.  Primary vessel switched from V-4 to V-3; secondary vessel switched from V-3 to V-2. Carbon in V-2 was replaced with 7 sacks
12/23/2003	of carbon. Per Haley & Aldrich, WPI opened 23B from 11 scfm to 15 scfm to raise influent concentration to the unit.  Storage tank was pumped out by Boeing. Shut down system and quenched V-3 and V-2. At Boeing's request, WPI shut off main water and power to unit over the holiday period. Carbon in V-4 was replaced with 7 sacks fo carbon.
1/5/2004	System re-started after holiday break. Greased blower, pumped water from V-3 and V-2 and compound into storage tank due to rain.
1/7/2004	Completed annual system checklist with Haley & Aldrich.
1/8/2004	Per Haley & Aldrich, WPI set flow on 23B to 12 scfm and on departure from the site, the undiluted inlet was 740 ppmv and Carbon 1 was 12.8 ppmv.
1/12/2004	System called in an alarm, WPI went to check on system and found system to be operating normally. Notified Haley & Aldrich.
1/15/2004	Per Haley & Aldrich, WPI opened VEW23B to raise undiluted influent concentration up to 920 ppmv at departure from site. Changed primary vessel from V-3 to V-2 and secondary vessel from V-2 to V-4.
1/19/2004	WPI was on site for carbon change when it was cancelled by Haley & Aldrich due to construction activities on site.
1/22/2004	WPI arrived on site and found dilution valve was opened on 1/21/04 by Haley & Aldrich due to construction activities during which the water line was broken. Well field is closed. WPI installed a 2 inch water valve per Haley & Aldrich drawing.
1/29/2004	WPI arrived on site to check well field and collect samples. System is currently running on dilution air only. Opened well field to collect lab samples and then returned system to full dilution air only.
2/2/2004	WPI arrived on site to open well field back on line after closing dilution valve. Turned on 2" water line and flushed line. Took apart back flow preventer and cleaned it. Upon departure, influent was at 534 ppmv and Carbon #1 was 9.2 ppmv per Haley & Aldrich.
2/3/2004 2/5/2004	WPI arrived on site to verify system was operating correctly. Pumped 50 gallons of water from compound and equipment was operating. WPI opened Wells VEW5, VEW6, VEW15A, VEW17A, VEW17B, VEW18A, VEW18B and VEW20A per Haley & Aldrich. WPI also set influent at 851 per Haley & Aldrich and at departure, breakthrough was 7.4 and exhaust was 0.9. Primary vessel was switched from V-2 to V-4; secondary vessel was switched from V-4 to V-3. Carbon was replaced in V-2 and V-3 with 7 sacks of carbon in each vessel.
2/12/2004	WPI changed primary vessel from V-4 to V-3 and secondary vessel from V-3 to V-2.
2/19/2004	Per Haley & Aldrich, WPI set the undiluted influent to 982 and the carbon 1 was 11.5 at departure. Carbon in V-4 was replaced with 7 sacks of carbon.
2/26/2004	Primary vessel was switched from V-3 to V-2 and secondary vessel was switched from V-2 to V-4.
3/4/2004	Primary vessel was switched from V-2 to V-4 and secondary vessel was switched from V-4 to V-3. Carbon was replaced in V-3 with 7 sacks of carbon. Per Haley & Aldrich, WPI reduced the flow from wells VEW10A, VEW11A, VEW12, VEW13A, VEW15B, VEW16A, VEW19A, VEW19B, VEW20B, VEW21A, VEW22B, VEW24A and VEW25A to increase flow from VEW23B.
3/11/2004	Primary vessel was switched from V-4 to V-3 and secondary vessel was switched from V-3 to V-2. Upon departure, WPI measured undiluted influent at 981 ppmv. Carbon was changed in V-2 with 7 sacks of carbon.
3/18/2004	On departure, influent was at 615 and 1-VEW-23B was at 100% open. Carbon I was at 6.8 ppmv. WPI called Haley & Aldrich and reviewed a readings and left system running at current settings. 7 sacks of carbon was replaced in V-4.
3/25/2004	On departure, influent was at 958 ppmv and Carbon I was 3.9 ppmv. Collected monthly samples. Primary vessel was switched from V-3 to
3/29/2004	V-2 and secondary vessel was switched from V-2 to V-4.  System called in an alarm to WPI. Arrived on site and found blower was off and vessels did not quench. WPI tested all fuses which were in
5/23/2004	working order. Computer was indicating that blower was shut down and dilution valve was fully open. WPI restarted system. System was

4/1/0004	running upon departure.
4/1/2004 4/8/2004	Arrived on site and found the system was off. WPI did reset and started the system. System was operating normally upon departure.  Arrived on site and found water pipe leaking at backflow preventer and ball valve at backflow turned off. WPI contacted Haley & Aldrich
4/0/2004	to notify them that the valve had been turned off. Primary vessel was switched from V-2 to V-4 and secondary vessel was switched from
	V-4 to V-3.
4/9/2004	WPI shut down 2" water main and repaired leak at backflow preventer. Added a 2" ball valve before check valve. WPI supported the
	backflow preventer with unistrut and painted all valves to remain open orange so that contractors would not close them. System was
	left running.
4/15/2004	On departure influent was 953 ppmv. Carbon was replaced in V-2 with 7 sacks of carbon.
4/22/2004	Per Haley & Aldrich, WPI closed Wells VEW 17A, 17B, 18A and 18B. WPI also adjusted Well VEW15A to flow of 5 per Haley & Aldrich.
	Upon departure, undiluted influent VOC's were 977 and flow was 760. Primary vessel was switched from V-4 to V-3 and the secondary vessel was switched from V-3 to V-2.
4/29/2004	WPI arrived on site to find lower gate open. Four extension cords were found missing. WPI changed the locks to 2004 and installed a
	chain at the lower gate. In addition, WPI found that rocks have been thrown into the gated area. Per Haley & Aldrich, WPI closed wells
	VEW5, VEW6, VEW14A and VEW20A. Added 7 sacks of carbon to V-4. Primary vessel was switched from V-3 to V-2 and the secondary
	vessel was switched from V-2 to V-4.
5/6/2004	Replaced 7 sacks of carbon in V-3. Per Haley & Aldrich, WPI closed wells VEW11A, 13A, 15A, 16A, 19A and 25A. WPI also opened sample
	ports on wells VEW11A, 13A, 15A, 16A, 19A and 25A, per Haley & Aldrich. After well adjustments, undiluted influent was 760 scfm and 1094
5/13/2004	VOC's. The carbon 1 breakthrough was 8.1, upon departure.  Replaced 7 sacks of carbon in V-2 and V-4. Primary vessel was switched from V-2 to V-4 and secondary vessel from V-4 to V-3. During
3/13/2004	change out, the vacuum hose turned on the water valve to V-3 and approximately 30" of water got into tank. Dumped water out and switched
	secondary tank to V-2 to allow V-3 to dry out.
5/14/2004	Per Haley & Aldrich, WPI closed VEW 23A and opened sample ports on wells VEW 5, 6, 14A, 17A, 17B, 18A, 18B, 20A and 23A. At departu
	undiluted influent was 978 VOC's and the flow was 782 scfm.
5/17/2004	WPI arrived on site and found blower was off. WPI reset the blower and re-started it. Per Haley & Aldrich, WPI opened dilution air valve and
E (4.0./000.4	closed well field valve. Haley & Aldrich is to inspect site.
5/18/2004	Per Haley & Aldrich, WPI arrived on site to check the temperatures in carbon tanks and to check water pressure. Water pressure was 72lbs   and 20lbs psi when flowing.
5/20/2004	Per Haley & Aldrich, WPI arrived on site to check the temperatures in carbon tanks.
5/27/2004	Per Haley & Aldrich, WPI closed dilution valve. WPI cleaned the inside of the control panel and changed the combination locks on the
	compound back to 2002.
6/3/2004	WPI arrived on site to find that construction had begun at the Wal-Mart. WPI personnel noted that four wheel drive tire tracks were noticable
0/10/0004	in and around the well field. There was no apparent damage to wells.
6/10/2004	Per Haley & Aldrich, WPI closed Wells VEW19B, 21A, 24A and opened their sample ports. At departure, Vacuum was at 94", flow was 751 s and VOC's were 985 ppmv.
6/17/2004	Per Haley & Aldrich, WPI shut off well field and system is running on full dilution air only until carbon is changed. Changed primary vessel from
	V-2 to V-3 and secondary vessel from V-3 to V-4. Closed wells VEW19B, 21A and 24A.
6/18/2004	Per Haley & Aldrich, WPI was on site for a carbon change - 7 sacks of carbon was added to V-2. Primary vessel was switched from V-3 to V-
6/04/0004	and secondary vessel was switched from V-4 to V-2.  Per light & Aldrich WRI ground there requirely 1 VEW 67.1 VEW 69 and 1 VEW 69. WRI ground the walk at 100% and tack readings.
6/24/2004	Per Haley & Aldrich, WPI opened three new wells - 1-VEW-27, 1-VEW-28 and 1-VEW-29. WPI opened the wells at 100% and took readings. 7 sacks of carbon to V-3.
7/1/2004	Per Haley & Aldrich, WPI opened wells - VEW 15A, 15B, 16A, 17A, 17B, 18A, 18B, 19A, 19B, 20A, 20B. WPI opened the wells at 100%
	WPI also closed down well VEW23B to 20%, open to lower effluent to 1096 ppmv. Primary vessel was switched from V-2 to V-3. Secondary
	vessel switched from V-3 to V-4. Added 7 sacks of carbon to V-4 and V-2. Secondary change out occured after carbon was added. Primary
	vessel was switched from V-3 to V-4. Secondary vessel was switched from V-4 to V-2. The influent into Carbon I seemed very warm and
7/8/2004	smelled like varnish. Two carbon tanks were changed out. The wells were adjusted and the the influent was at 1096ppmv.  WPI was on site to conduct carbon change - 7 sacks of carbon was added to V-3. Primary vessel switched from V-4 to V-2 and secondary
170/2004	vessel switched from V-2 to V-3. Per Haley and Aldrich, WPI opened 23B 100% and closed wells 15A&B, 17A&B, 18A&B, 19A&B, 19A&B,
	and 20A&B to raise influent VOC, and opened sample ports on closed wells.
7/15/2004	Per Haley&Aldrich, WPI closed wells 8A&B, 10A, 16 A&B, 22B to raise undiluted influent VOC's. Sample ports were opened on the closed
	wells. At departure, undiluted influent flow was 720 scfm and the VOC's were 280. WPI was onsite to conduct a carbon change. 7-sacks
7/30/2004	of carbon was added to V-4.
7/30/2004	Arrived on site to check alarm, the blower was off. V-2 had one temperature reading at 158 degrees. WPl called H&A, who had WPl quench V-2 to the top of the vessel. System was restarted, and was running fine on departure.
8/19/2004	Primary vessel switched from V-3 to V-4 and secondary vessel switched from V-4 to V-2. Well 1, 2 and 3 closed due to construction at Walmary vessel switched from V-4 to V-2.
8/26/2004	Readings were not completed on well field, due to construction at site.
9/2/2004	Primary vessel switched from V-4 to V-3; secondary vessel switched from V-2 to V-3. Well 9 closed to 20%, Well 21B closed to 10%, well
	23B closed to 23%. SVE System running hot. Wells 4,7,10A, 11A, 13A, 14A, 14B, 21A, 22B, 24A, and 25A opened to 100% to add cooling
9/3/2004	air to system. Undiluted influent still at 118 degreet. Manual dilution valve opened 50% to cool system until the next day to adjust system Readings and well settings were recorded at departure. Well 23B, 9, 21B opened to 100%.
9/9/2004	At departure, due to system temperature, air was turned on 50%. Per Haley & Aldrich, WPI closed Well 10A, 11A, 13A, 14A, 21A, 22B,
5.5.25	24A, and 25A, to raise undiluted concentrations. After reading the wells, WPI checked the sub-unit and found the temp was at 131 degrees.
	Haley and Alrdrich had WPI open the wells that had been closed earlier. The system was hot, so the dilution valve was opened to 50%. The
	blower seems to be overheating the air going into the system.
9/30/2004	On 9/28/04, Haley &Aldrich had WPI close the dilution valve. At 1:45pm, WPI shut down the SVE unit and flooded V-2 and V-3 with water.
	Vapor lab samples were collected at Wells 7, 9, 10A, 10B, 11A, 11B, 12, 21A, 21B, 23A, 24A,24B.
3/2/2006	Started sytem. Perfromed test on system alarms,
	Vessel V-4 is off line
3/8/2006	Checked system for operation, Vessel V-4 is off line
3/9/2006	Checked system operation, collected laboratory
3/3/2000	Checked system operation, collected laboratory analysis, Vessel V-4 is off line
3/10/2006	Checked system for operation, Vessel V-4 is off line
0/46/0055	Observed another for an archive Manage M. La off Par
3/12/2006	Checked system for operation, Vessel V-4 is off line

3/13/2006	Checked system for operation, Vessel V-4 is off line, repaired high-high switch on sump, changed one thermocouple wire
3/14/2006	Checked system for operation, Vessel V-4 is off line, leak on 8" steel stand pipe
3/15/2006	System shut down at 12:10AM, restarted system at 8:20AM
3/16/2006	Performed weekly O&M at the site
3/21/2006	Performed weekly O&M at the site. System shut down at 11:00 PM due to high level in sump from rains
3/24/2006	Performed weekly O&M at the site. Collected laboratory analysis of the system
3/28/2006	System down due to High water. Setup Sump pump and pumped out rain water.
3/29/2006	Pumped rain water out of compound.
3/31/2006	System operating upon arrival, performed weekly O&M

#### **Notes:**

ppmv: parts per million by volume

scfm: standard cubic foot per minute (acfm corrected for vacuum and temperature)

NA: data was not recorded or available

- (1) Direct flow readings taken by hand-held TSI Veloci-calc Plus
- (2) Measurements taken with a Foxboro OVA FID calibrated to 100 ppmv Hexane, results as Hexane

<sup>\*</sup> Well head readings not taken. Estimates based on diluted inlet concentrations

<sup>\*\*</sup> Well opened between 3/12/03 and 3/24/03 as part of start-up procedures. Data provided was collected on 3/24/03

<sup>\*\*\*</sup> Well opened between 3/25/03 and 4/15/03 during re-start procedures. Data provided was collected on 4/29/03
